Why Should We Care

#1

What is AI?

AI, or artificial intelligence, refers to the simulation of human intelligence processes by machines, especially computer systems.

Stats

GENERATIVE AI

Stats
GENERATIVE AI

- By 2025 30% of outbound messages by major companies will be AI generated
- By 2030 90% of major film content will be AI generated
- By 2025 30% of new drug discovered using AI tools
- According to the World Economic Forum AI is expected to replace 85 million jobs worldwide by 2025.
    - Though that sounds scary, the report goes on to say that it will also create 97 million new jobs in that same timeframe.
- 40% of Students admit to using AI (inside Higher Ed, November 2023)
    - 65% of students said training in how to use AI is a need and would benefit them in their futures.
- Forecast worldwide AI software market will grow from $64 billion in 2022 to nearly $251 billion in 2027 (International Data Corporation)
        - $1.3 Trillion within the next 7 years. (Bloomberg, 2023)
        - As a means of comparison that's equal to paying a $1,200 house payment each month for 90,277,778 years!
- 46% of high schools students say they've used AI (Education Week, Dec 2023)
    - BUT of those scoring in the top quarter of the ACT 53% said they used AI
    - COMPARE that to those scoring in the bottom quarter of the ACT, which was 36% of students

Teacher Observations

Generate areas of strength and suggestions for next steps for a teacher based on a classroom observation.

Teacher's Observed Areas of Strength:

Warm and personable with students, great monitoring of student work, strong alignment of the lesson, great voice and tone, seating arrangement supports learning, etc.

Teacher's Observed Opportunities for Growth:

Talking over students, too much teacher talk time, misaligned objective and independent practice, etc.

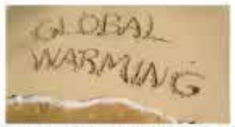
The impact of climate change on the global economy

Keith Wade, Chief Economist and Strategist
Marcus Jennings, Economist



Against a backdrop of rising shareholder interest, we explore how global warming is likely to impact global activity and discuss the need for a collective policy response. Our main themes are as follows:

The effect on growth and inflation (page 2)

- The long-run effects of climate change will most certainly be negative for global economic activity. Damage to the global capital stock and disruptions to labour supply will reduce productivity and economic activity. Inflation will increase as production is curtailed, particularly in agriculture, further weakening real incomes and spending. Whilst there will be winners and losers from warming of several degrees, all countries will, at some point, lose out to climate change.

- Inflation is likely to rise over time, driven by rising food prices and an increase in the cost of energy. Although the climate of some countries is predicted to become more accommodative to agricultural yields in the medium term, the long-run implications of rising temperatures are likely to reduce global crop yields overall.

- Costs are also likely to increase through higher insurance charges. The current curtailment of policy cover for flooding in areas such as Florida is the start of a long-term trend whereby insurance companies take climate change further into account. Premiums in climate risk areas are set to increase, feeding into higher costs for businesses and homeowners. From this perspective, the costs of climate change are already affecting global activity.

Climate damage functions: quantifying the impact on activity (page 3)

- Valuing the future loss in economic output attributable to climate change produces a range of estimates which vary according to views about whether a tipping point is reached between 2 - 4°C of warming. In a worst case scenario, global warming could be seen to reduce annual GDP growth by over 1% between the present day and 2080.

Regional effects (page 6)

- Developing countries are set to absorb much of the losses caused by climate change. Relying more heavily on climate sensitive sectors such as agriculture and tourism, and having naturally warmer climates, they will experience the most adverse effects on activity. Ratings agencies are beginning to factor these effects into their assessments.

Policy responses (page 8)

- Effective policy response will require collective recognition and action from all parties involved. Shareholders have a role, but effective adjustment will require market-based mechanisms such as carbon pricing and potentially rising insurance costs to alter behaviour.

Recommend | Custom

1. What is the Bank of England's stance on the risks of climate regulation limiting global temperature increases? →
2. What is the most widely proposed measure to combat global warming from an economic perspective? →

Type a question or type "/" to select a prompt.
